Introduction:

Welcome to Aiclipse, a deepfake detection web service. By accessing or using Aiclipse, you agree to these Terms of Service. They are governed by the laws of the European Union (EU). If you do not agree to these Terms of Service, you will not be able to use Aiclipse.

Aiclipse allows users to upload images for analysis by our AI model to determine the likelihood that an image has been AI-generated or manipulated. The service provides a probabilistic prediction, **NOT DEFINITIVE ANSWERS**, as a result of the analysis. Users may optionally choose to post the image and its result to a public Community Page where other registered users can view the content, vote on whether they agree or disagree with the result, and leave

comments. By using Alclipse, you confirm that you have read and understood both these Terms and the Privacy Notice.

Eligibility and Age Restrictions:

18+ Only:

Alclipse is intended solely for users who are 18 years of age or older. By creating an account or using this service. We do not knowingly provide services to minors. If you are under 18 you are strictly prohibited from registering or using the platform. Users are responsible for providing their true age during registration. Providing a false age is a violation of these Terms. Accounts of users who are discovered to be underage will be removed.

Account Registration and Security:

Registration Required:

To access Alclipse's features you must create an account. During registration, you agree to provide accurate, honest, and complete information about yourself. You are responsible for maintaining the confidentiality of your login credentials and for all activities that occur under your account. You must notify us immediately if you suspect any unauthorized use of your account or any other breach of security. Creating accounts to impersonating another person or entity is strictly prohibited.

Account Responsibility:

You are responsible for all content and actions taken through your account. You agree to keep your account information up-to-date and to use a strong password to protect your account. Alclipse will not be liable for any loss or damage arising from your failure to comply with these account security obligations.

Description of Services:

Deepfake Detection:

Alclipse provides an image analysis service powered by artificial intelligence (Vision Transformer Neural Network) . You can upload an image to the platform, and our system will analyse it to predict the likelihood that the image has been AI-generated or digitally manipulated. The result is given as a probability. **This result is a probabilistic assessment, not a definitive statement of fact.** It is meant to help users evaluate the authenticity of images, but it should not be solely relied upon for critical decisions (legal, financial, reputational, or otherwise). We emphasize that deepfake detection is not perfect both false positives and false

negatives are possible. Alclipse does not guarantee that the service will identify all fake content or never mistakenly flag genuine content.

No Facial Recognition:

Our analysis is limited to detecting signs of AI-generation or manipulation in images. We do not perform facial recognition, identity verification, or any form of biometric identification on uploaded images. We do not create or store biometric templates. The system examines visual patterns to assess authenticity but does not attempt to recognize any person or extract personal data like names or identities from an image. In other words, we only scan the image to check the likelihood it's a deepfake; we do not analyse the face to determine who it is or record unique facial data.

Optional Community Page:

After you receive an analysis result for an uploaded image, you have the option to share that image and its result on the Alclipse Community Page. If you choose to share, the image, the deepfake probability result, your username, and any description or comment you add will become visible to other Alclipse users. On the Community Page, other users can vote "Real" or "Deepfake" and leave comments. This community feature is designed for. Posting to the Community Page is entirely optional. You can use the analysis service privately without having to share your content publicly.

User Content and Uploads:

User Responsibility for Content:

You retain ownership of any images or content you upload to Alclipse. However, by uploading an image, you represent and warrant that you have all necessary rights and permissions to use and share that image, and that doing so will not violate any law or anyone's rights. You are fully responsible for the content you upload and any consequences of uploading or sharing that content. This includes ensuring that you are not uploading content that belongs to a third party unless you have the legal right to do so. You must not upload images containing personal data of others without proper authority. If an image contains other people, or sensitive information you must have consent or legal justification to upload it, and you should understand the privacy risks. We caution users to only upload appropriate content and respect others' privacy and rights.

Prohibited Content. You agree NOT to upload or share any content through Alclipse that:

Infringes Intellectual Property or Privacy:

Any image or material that violates copyright, trademark, or other proprietary rights of others, or content that reveals someone's personal or biometric information without consent, is strictly prohibited. If you post content that violates any of the rules below, we may remove it and take action on your account. You are liable for any damages or legal consequences resulting from

unlawful or prohibited content you upload. Alclipse is simply the hosting platform and analysis tool. We expect users to follow these rules diligently.

Illegal or Harmful Content:

Any content that is illegal under applicable law, or that is threatening, harassing, defamatory, libelous, invasive of privacy, or that could cause harm. You may not use Alclipse to impersonate others or spread misinformation.

Hateful or NSFW Content:

Content that is hateful, discriminatory, or incites violence against any group or individual is not allowed. Similarly, sexually explicit, pornographic, or extremely graphic content is prohibited on the platform. (Alclipse is a detection tool, not a platform for sharing NSFW or violent imagery. We reserve the right to moderate and remove any such material.)

Malicious Content:

You must not upload any content that contains malware, viruses, or any code intended to harm or hijack the operation of the service or other users' devices. Also, do not upload images for the purpose of testing or circumventing the platform's security or detection algorithms in a malicious manner.

Content License for Uploaded Images:

When you upload an image to Alclipse for analysis, you grant us a limited, non-exclusive, worldwide license to process the image for the purpose of providing the deepfake detection service. This means we can temporarily store, analyse, and display the image as needed to give you a result. We will not use or redistribute your image beyond providing the service you requested, unless you choose to share it on the Community Page. If you do not post the image to the Community Page, the image and analysis results will be deleted after the analysis is completed and delivered to you, typically immediately after processing. We do not retain or use non-shared images for any other purpose. If you do choose to post to the Community Page, you additionally grant us the right to display that image, your username, and the analysis result to other users as part of the community feed. This community post license is necessary for us to show your content on our site.

Content Deletion:

If you upload content but do not share it publicly, it will not be stored in our databases after analysis. If you post content to the Community Page, it may remain accessible to others until

removed. You have the option to delete or “unpublish” your own community posts at any time, and we encourage you to do so if you no longer want the content to be publicly available. Once you delete an image you posted, we will remove the image and associated data including any comments or votes on it from the platform within a reasonable timeframe. In any case, no community-posted image will remain online for more than one year from its upload date. Published images are automatically purged after one year to protect user privacy and manage data storage. Note that while a community post is live, other users might have seen or even downloaded the image. Alclipse cannot remove content that has been downloaded by others. Always consider the potential permanence of anything you share publicly.

Community Page and Reputation System

Community Participation:

The Community Page is a public forum where deepfake analysis results can be shared and discussed. When you post an image and its Alclipse analysis result to the Community Page, it becomes visible to others along with your username and any caption or comments you provide. Other registered users can then interact with your post by Voting on whether they agree or disagree with our assessment and commenting to discuss the image, ask questions, or provide feedback.

By posting to the Community, you understand that your content is public to the Alclipse community. You should not post anything to the Community Page that you wouldn't be comfortable sharing publicly. Community posts must adhere to all the rules outlined in the User Content and Uploads section above. We rely on our community to help maintain a respectful and lawful environment. Users can report inappropriate posts, which will invoke our moderation and takedown procedures . Before an image is posted publicly onto the community it will go through a screening moderation process to ensure that the image does not contain **nudity, violence, personal or sensitive data (including minors) and gore**.

Reputation Scoring:

Alclipse incorporates a reputation system to encourage accurate identification of deepfakes and constructive participation. Each registered user will earn a reputation score based on how accurately they guess whether images are real or AI-generated during community voting. In practice, when you vote on community your vote may be later evaluated. Users who consistently make accurate determinations will gain points to their reputation score. Conversely, inaccurate guesses might not earn points and could relatively lower your standing over time. This reputation score is reflected in your profile and may be visible to others as an indicator of your experience or reliability in spotting deepfakes.

Impact on Voting Weight:

A user's reputation score can impact the weight of their votes on community posts. This means that contributions from users with higher reputation might carry more influence in aggregating community feedback . This system is designed to reward knowledgeable users and improve the

quality of community judgments. However, every user's voice matters even new users have the ability to vote and comment, and the system is balanced to avoid unfair domination. The reputation mechanism is in place to elevate informed analysis and help counter any malicious or random voting. We will also take these voting weights into account when we retrain our AI model using the images and the community predicted results.

Fair Use of the Reputation System:

Users shall not attempt to cheat or manipulate the reputation system. Prohibited behaviours include, but are not limited to: creating multiple fake accounts to upvote your own posts or influence voting, coordinating with others to falsely inflate or deflate scores, or any automated activity that skews results. If we detect cheating or manipulation, we may terminate involved accounts. Reputation scores are provided as a feature of the community experience; they do not represent an endorsement by Alclipse and should not be construed as a formal credential. We reserve the right to adjust the reputation and voting weight algorithms to improve the system or address unfair outcomes. All such adjustments will be made in good faith to promote fairness, transparency, and accountability in the community.

Acceptable Use and Prohibited Activities

We are committed to maintaining Alclipse as a secure, reliable, and ethical service. By using Alclipse, you agree to the following general rules of conduct and use:

Lawful Use Only:

You will use the platform only for lawful purposes and in accordance with these Terms. You shall not use Alclipse to engage in any unlawful, fraudulent, or malicious activity.

No Abuse or Disruption:

You will not misuse the platform or interfere with its normal operation. This means you must not attempt to hack, destabilize, or adapt Alclipse or its software, and you must not transmit any worms, viruses, or harmful code. You also agree not to circumvent any security or authentication measures of the service.

No Unauthorized Use of Others' Accounts:

You must not use another person's Alclipse account or credentials without authorization. Likewise, you should not share your own login details with others. Keep your account secure and unique to you.

No Resale or Commercial Misuse:

You may not resell or commercially exploit access to Alclipse's services without our permission

Violating any of these acceptable use rules is considered a serious breach of these Terms and may lead to immediate suspension or termination of your account. We reserve the right to monitor usage, investigate any suspected breach, and take appropriate action to enforce these rules.

Moderation and Takedown Policy

Alclipse takes content moderation seriously. We strive to create a community that is informative, respectful, and lawful. To achieve this, we have a takedown and complaint mechanism for any content that is inappropriate, infringing, or unlawful.

Reporting Content:

If you encounter any content on Alclipse that you believe violates these Terms or your rights, please report it to us immediately. The platform includes a “Report” feature on community posts for this purpose, or you can contact us via the provided contact information with your complaint. When reporting, please provide a description of the content and why you believe it should be removed.

Takedown Process:

Upon receiving a report or otherwise becoming aware of content that potentially violates our rules or the law, we will act quickly to review and address it. Our team will evaluate the complaint and the content in question. If the content is found to violate these Terms or applicable laws, we will remove the image from the community webpage and purge it from our database. We aim to resolve content complaints promptly, acknowledging that timely removal can be important for issues like privacy or defamation.

Notice to Users:

When content is removed or moderated, we will notify the user who posted the content about the removal and the reason. Repeated violations will lead to stronger enforcement actions on the user’s account (see Account Suspension and Termination below). Note that Alclipse’s decision to remove content is at our sole discretion in line with these Terms. Even content that is not unlawful may be removed if it breaches our policies or if we deem it harmful to the community.

Copyright and Legal Complaints:

Alclipse complies with intellectual property laws. If we receive a copyright infringement notice regarding content on our platform, we will expeditiously remove the allegedly infringing material and notify the user who posted it. Users who repeatedly infringe copyrights or other IP rights will have their accounts terminated. Likewise, if a person depicted in an image or a data subject

raises a privacy or defamation complaint, we will evaluate it under applicable law and may remove the content to respect individual rights. We also may refer any content that appears illegal (such as child exploitation imagery or credible threats of violence) to the appropriate authorities.

Account Suspension and Termination:

We reserve the right to suspend or terminate user accounts for violations of these Terms or applicable laws. In particular, if a user continually violates these Terms of Service, they may be temporarily suspended or permanently banned from the platform. We will attempt to use a strike where appropriate, but severe violations can result in immediate termination without prior warning. All moderation actions will be documented and carried out in a fair and non-discriminatory manner.

Privacy and Data Protection

Your privacy and the security of your data are extremely important to us. Aiclipse is based in the EU and adheres to EU data protection laws, including the GDPR. We have conducted a Data Protection Impact Assessment (DPIA) during our development process to identify and mitigate privacy risks. We maintain a detailed Privacy Notice that explains what personal data we collect, how we use it, and your rights regarding your data. The following is a summary of key points related to data and privacy:

Data Collection:

When you create an account, we collect personal information such as your name, email address, and date of birth. When you use the service, we process the images you upload and the results we generate. If you engage with the Community Page, we also process any content you post and your interactions. We do not collect more data than necessary for providing the service. We do not access your device's stored photos or personal files beyond the specific image file you choose to upload, and we do not track your location or other unnecessary data as a condition of using the service. Any payment details for premium features are handled via trusted third-party payment processors and not stored on our servers beyond a record of the transaction.

Data Use:

Personal data is used only to provide and improve the Aiclipse service. This includes using your registration information to manage your account and contact you, your uploaded image to perform the deepfake analysis, and your community posts or votes to facilitate the community features. If you post an image and result to the Community Page, that image and associated data are displayed publicly to other users. We do not sell your personal data to third parties or use your images for any purpose unrelated to the deepfake detection service. We might analyse aggregated, anonymized usage data to improve our AI model or user experience, but this will not identify you personally. **Images and prediction feedback voluntarily posted to the Community Page may also be used to retrain and improve our AI model.** This helps enhance

accuracy by learning from real user input. Only public images and community vote data are used for retraining, and this is done in line with GDPR and ethical AI guidelines. Images not posted to the Community Page are never used for model training.

Data Storage and Retention:

Images that you upload and do not share to the community are not stored in our database after we deliver the result to you. Those images and their analysis results exist temporarily in our system memory or cache only to the extent needed to process and show you the outcome, then they are deleted. If you choose to share an image on the Community Page, the image and result will be stored on our servers to be accessible to others. We will retain community-posted images for up to one year, after which they are purged from our system automatically. We may also delete them sooner if, for instance, the content is reported and confirmed to violate our terms or if you, as the uploader, delete the post. Other personal data like your account information is retained for as long as you have an active account. If you delete your account, we will erase your personal data including any images you uploaded within a reasonable period.

Data Sharing and Processors:

By default, we do not share your personal data or uploaded images with third parties. The deepfake analysis is performed on our own servers. We use third-party infrastructure services, cloud storage and database hosting, to run the platform, which means your data may be processed by those providers on our behalf, but always under strict agreements that they **cannot access or use your data for any purpose except storing or processing it for us**. These providers act as our data processors under GDPR, and we ensure they are also compliant with privacy laws. For the content moderation API we send the minimal necessary data (just the image) and under terms that protect your data.

Security Measures:

We implement industry-standard security measures to protect your data, including encryption of data in transit and at rest. We host data on secure, EU-based servers and limit access to personal data to authorized personnel who need it to operate the service. We maintain logs and monitor access to our databases. However, no system is 100% secure; by using the service, you acknowledge that any data transmission carries some risk. We promise to notify users and authorities of any significant data breach as required by law.

Your Rights:

Under GDPR and applicable laws, you have rights regarding your personal data. These include the right to access your data, correct it, delete it, restrict or object to certain processing, and data portability. You also have the right to withdraw consent where consent is the basis of processing, and to object to decisions based solely on automated processing. Although Alclipse does not make legal or similarly significant decisions by automated means without human oversight the reputation score and content moderation involve human-reviewed policies to ensure fairness. To exercise your rights or inquire about your personal data, please contact us (see **Contact Information** at the end of these Terms).

By using Alclipse, you agree to our collection and use of data as described here and in the Privacy Notice. We are committed to **GDPR compliance for all users, regardless of location** (we apply European data protection standards to all accounts). If you have any privacy-related questions or concerns please contact us.

Disclaimers of Warranties

Alclipse is an **experimental deepfake detection service**, and while we strive for accuracy and reliability, there are important disclaimers you need to understand:

Probabilistic Results:

Alclipse provides percentage-based estimates **not guarantees** about whether an image is Deepfake. Results may be wrong and should not be treated as absolute truth. Do not rely solely on our outputs for legal, financial, reputational, or medical decisions. Always seek additional verification when accuracy matters.

No Professional Advice:

Alclipse does not provide legal, medical, or investigative advice. Any insights are informational only and should not be used to justify publishing, sharing, or acting on sensitive or controversial content.

Service Provided “As Is”:

We offer Alclipse as-is and make no guarantees around uptime, performance, or accuracy. While we aim to improve the system over time, we do not warrant fitness for any specific purpose or uninterrupted availability.

User and Third-Party Content:

Users are responsible for content they share. We do not verify or endorse community posts, comments, or any external links, and are not liable for their content.

Evolving Threats:

Deepfakes continue to advance, and no tool including Alclipse can detect all of them. Users should remain cautious and never assume an image is authentic solely based on our analysis.

Limitation of Liability

Use at Your Own Risk:

To the fullest extent permitted by applicable law, Alclipse and its creators, operators, affiliates, and partners will not be liable for any indirect, incidental, special, consequential, or punitive damages, or any loss of profits or revenues, whether incurred directly or indirectly. This includes, for example, damages for loss of data, loss of goodwill, or other intangible losses, resulting from (a) your use of, or inability to use, the service; (b) any content obtained from the service (including the results of image analyses, which might be incorrect).

No Liability for User Content:

Alclipse is a platform that allows users to upload and share content. We are **not responsible for what users upload or post**, and we do not assume liability for any user-generated content that might be infringing, unlawful, or otherwise violative. That said, when we are notified of such content, we will remove it as outlined in our Moderation policy if that content makes it past our moderation filter. But any harm or legal claim arising from content a user uploaded is fundamentally between that user and any affected party. **You (as the uploader) will be solely responsible**; you agree to indemnify and hold Alclipse harmless from any claims or damages in such cases. Likewise, if you rely on a result on the platform and suffer harm, Alclipse will not be liable for the consequences of your actions.

System Accuracy and Errors:

Alclipse will not be liable for mistakes or errors in the analysis provided by the AI system. We have warned that results are probabilistic and not definitive, and by using the service, you acknowledge that risk. Any action you take based on the service's output is taken at your own discretion and risk. We strongly discourage using Alclipse's output for high-stakes decisions, and thus we will not accept liability for outcomes from such use.

No Exclusion for Gross Negligence or Intentional Misconduct:

Nothing in these Terms shall limit or exclude our liability for gross negligence, intentional misconduct, or for death or personal injury caused by our negligence or fraud

Indemnification:

You agree to indemnify and hold harmless Alclipse and its officers, directors, employees, and agents from and against any claims, disputes, demands, or expenses arising out of or in any way connected with (i) your violation of these Terms, (ii) your violation of any laws or regulations or third-party rights in relation to your use of the service, or (iii) any content you upload or share on Alclipse, including any claims that your content violated another's rights or caused harm.

Governing Law and Dispute Resolution

Governing Law:

These Terms and any dispute or claim arising out of or in connection with these Terms or your use of Alclipse including non-contractual disputes or claims **shall be governed by and construed in accordance with the laws of the European Union and the applicable laws of the Republic of Ireland**. We apply EU data protection standards (GDPR) to all users, regardless of their location. If you are accessing the service from outside the EU, you agree that your use is subject to EU law and these Terms as if you were in the EU

Jurisdiction and Forum:

You agree that any disputes shall be subject to the exclusive jurisdiction of the courts of Ireland, unless otherwise required by applicable consumer law.

Dispute Resolution Process:

Before filing any legal action, we encourage you to contact us to discuss and attempt to resolve the issue informally. Often, disputes or concerns can be addressed through our support channels.

Changes to These Terms

Alclipse may revise or update these Terms of Service from time to time. We will provide notice of material changes, such as by posting an announcement on our website or sending an email to the address associated with your account. **Upon update of terms and service you will be prompted to reaccept the updated terms**. We encourage you to periodically review the Terms to stay informed of any updates.

Contact Information

If you have any questions, concerns, or feedback about these Terms or the Alclipse service, please contact us. We believe in clear communication and prompt resolution of issues. You can reach us at **aiclipse123@gmail**. Additionally, if you need to report content or file a complaint, you may use the same contact information or any dedicated reporting mechanism on the site. We will respond as quickly as possible to address your inquiry.
